

Carey ASFALTSLATE SHINGLES

"The Shingle That Never Curls."

Carey Asfaltslate Shingles are taking the place of tile, slate and wood shingles in every section of the country.

THEY are more economical than slate or tile roofing, and they do not break or crack from handling or readjustment of the building. They are more beautiful and durable than wood shingles, without any of their fire risks.

Carey Asfaltslate Shingles are suitable for use on the most elaborate homes and beautiful bungalows, as well as cottages, garages and other inexpensive buildings where beauty and durability are desired at the lowest possible cost.

CONSTRUCTION.

CAREY Asfaltslate Shingles never curl—they lay permanently flat. The special tempered asphalt compound used in their manufacture makes the heavy felt base stiff and absolutely non-curling.

The crushed slate surface will protect your home against fire-danger from flying sparks.

CAREY Asfaltslate Shingles are made in two sizes, the large size measuring 10 x 15 3/4 inches and weighing approximately 300 pounds to the square. The regular size measures 8 x 12 1/4 inches and weighs approximately 245 pounds to the square.

Large size Asfaltslate Shingles are laid 5 inches to the weather and 3/4 of an inch apart. Regular size are laid 4 inches to the weather and 1/2 inch apart.

Large size Asfaltslate Shingles were made especially to meet the demand of architects and builders for an extra heavy, slate surface shingle for use on schools, churches, public buildings and fine residences.

Carey ASBESTOS SLATE SHINGLES

CAREY Asbestos Shingles were made to meet the demand for a roof covering affording high fire protection, combined with high weathering qualities. Composed of three minerals—Asbestos, Asphalt and Slate, one can readily understand why these shingles are practically fire-proof and indestructible.

Carey Asbestos Shingles are recommended for residences, garages, barns and any structure for which fire protection, economical service and attractiveness is desired.

Carey Asbestos Shingles are built on a heavy asbestos felt, thoroughly saturated with asphalt. This felt is coated with an asphaltic cement into which, while hot, is imbedded a layer of crushed slate.

Carey SHINGLES AND ROLL ROOFINGS

FOR
BETTER
BUILDING

"A Roof for Every Building."

THE reason you are offered several kinds of ready roofing, as described in this folder, is because The Philip Carey Company believes in providing building owners with a roof for every type of building.

The roof you put on your building should be governed by the purposes for which the building was built and the length of service you wish to obtain from the roof.

It is a waste of money to put a heavy, 40 year roofing on a tool shed. And it is running the risk of damage to your building and the things in it to put a light weight "tool shed" roofing on a fine barn or factory building.

THE Philip Carey Company offers you the right type of roofing for every kind of building. For nearly 50 years this Company has manufactured ready roofing in various weights and grades, and with different kinds of surface materials, using a great variety of felts and building up the roofings with asphalt refined by different processes. This long experience plus the very best raw material, skilled labor and most modern machinery, make Carey Roofings as perfect as it is possible to produce.

THE PHILIP CAREY COMPANY

GENERAL OFFICES AND FACTORY,
LOCKLAND, CINCINNATI, OHIO.
BRANCHES AND DISTRIBUTORS IN ALL LARGE CITIES.

STANDARD SLATE ROOFING.

Carey Standard Slate Surface Roofing is made just like Carey Lastile only it is lighter in weight and lower in cost.

It is surfaced with Red, Green or Blue Black Crushed Slate.

Standard Slate Roofing weighs about 80 lbs. per roll of 108 sq. ft. Nails and cement are included with each roll.

CAREY ASBESTOS SLATE ROOFING

Is durable, attractive, economical and insures a high degree of fire protection.

Carey Asbestos Slate Roofing is especially recommended for bungalows, garages and other buildings where an attractive, durable and economical roof is desired in combination with fire protection.

Carey Asbestos Slate Roofing is built on a heavy asbestos base saturated with a high fire point asphalt and covered with natural crushed slate.

This combination of natural minerals insures as near an indestructible and durable roof as it is possible to attain.

Carey Asbestos Slate Roofing is furnished in Red, Green and Blue Black, and is put up in rolls weighing about 85 lbs., which contain 108 square feet.

"A Roof for Every Building."

All Carey Roll Roofings are put up in rolls 36 feet long by 3 feet wide, containing 108 square feet, sufficient to cover 100 square feet of roof surface, after allowing for laps.

CAREY MICA-KOTE ROOFING.

MICA-KOTE is recommended as the best ready roofing on the American market. Try to cut it with a knife, try to tear it with your hands, or build a fire on it and you will find it is tougher, stronger and more fire-resisting than any other similar piece of goods obtainable.

It is surfaced with crushed mica (isinglass). The mica flakes lay flat and shed water like the scales of a fish.

Mica-Kote is recommended for both small and large buildings, and in the heavier weights for buildings that are permanent and require the best roofing.

CAREY MICA-KOTE ROOFING is made in Four Weights, as follows:
Light, about 35 lbs. per roll.
Medium, about 45 lbs. per roll.
Heavy, about 55 lbs. per roll.
Extra Heavy, about 65 lbs. per roll.
108 square feet to roll.

CAREY LASTILE ROOFING

Consists of an extra heavy felt base thoroughly saturated and coated with a high grade asphalt and surfaced with Red, Green or Blue Black crushed slate.

Besides being spark-proof and extremely durable, Carey Lastile is the most attractive kind of roll roofing you can buy. The red, green and blue black color blend perfectly with any color scheme.

Extra Heavy

Lastile

85 lbs.
per
roll of
108
Square
Feet.

Super Grade

Lastile

100 lbs.
per
roll of
108
Square
Feet.

CAREY Lastile Roofing is especially recommended for small cottages, bungalows, summer camps, garages and all kinds of farm and factory buildings where an attractive, durable, economical roofing is desired.

The slate surface is sparkproof and a protection against fire. It is fadeless and saves the big item of upkeep expense—painting.

Carey Lastile Roofing is extensively used for siding or paneling as well as roofing, and presents a hard, durable crushed slate surface of exceptional wearing quality.

CAREY PHILCO ROOFING

(Grapevine Finish)

Carey Philco Roofing is a high grade, plain surface roofing for all purposes. It is made in three weights to meet every roofing need. Light weight for temporary buildings, Medium weight for poultry houses, implement sheds, etc., Heavy weight for warehouses, factories and the larger farm buildings.

SHIPPING WEIGHTS:

Light, about 35 lbs. per roll.
Medium, about 45 lbs. per roll.
Heavy, about 55 lbs. per roll.
108 square feet to roll.

Nails, Cement and Instructions for Applying Included in Each Roll.

CAREY SURETY ROOFING.

Carey Surety Roofing is an economical, smooth surface, hard finished roll roofing.

It is ideal for all kinds of farm and factory buildings and is highly recommended for any building where a low cost, durable roof is desired.

APPROXIMATE WEIGHTS:

Light, about 35 lbs. per roll.
Medium, about 45 lbs. per roll.
Heavy, about 55 lbs. per roll.
